# Steps 6 and 7

## Physical with 2-Step PPD Drug Screening

## Step 6: Physical with 2-Step PPD

- A physical must be done and the healthcare provider must complete the entire physical chart and sign where indicated.
- ***Original form is found on page 27 and is required at time of registration***
- A 2 step PPD must be completed

### How to Conduct a Two-Step PPD / Mantoux Test ( For your Health Care Provider)

The Two-Step PPD\* / Mantoux is used to detect individuals with past Tuberculosis (TB) infection who have diminished skin test reactivity. This procedure will reduce the likelihood that a boosted reaction is later interpreted as a new infection.

There are **four (4) required visits** when following the Two-Step Mantoux protocol:

#### ***Visit 1, Day 1***

Place the 1<sup>st</sup> skin test and have the patient return to the doctor's office in 2 – 3 days (48 – 72 hours) to read the results.

#### ***Visit 2, Day 3 or 4***

Read the 1<sup>st</sup> skin test results (48-72 hours of visit one). If the first test is positive, the patient may have (had) a TB infection. Refer the patient for a chest x-ray and physician evaluation. An asymptomatic patient, whose chest x-ray indicates no active disease, may begin work.

#### ***Visit 3, Day 7 or 10***

Place a 2<sup>nd</sup> skin test on patients whose 1<sup>st</sup> test was negative at 48 – 72 hours. Depending on office policy, the 2<sup>nd</sup> test is given between seven (7) - ten (10) days from the initial test date. Have the patient return to the doctor's office in 2 – 3 days (48 – 72 hours) to read the results.

#### ***Visit 4, Day 10 or 13***

Read the 2<sup>nd</sup> skin test results (48-72 hours of visit three). A positive 2<sup>nd</sup> test indicates TB infection in the distant past. Refer the patient for a chest x-ray and physician evaluation. An asymptomatic patient, whose chest x-ray indicates no active disease, may begin work.

#### **Important Information**

- The test results for Test 1 and Test 2 must be read within 48-72 hours. If it is longer than 48-72 hours, the PPD test and results are invalid.
- The maximum time allowed between Test 1 and Test 2 is 2.5 weeks. If the patient receives Test 2 after 2.5 weeks, the Two-Step method and testing is invalid.

#### ***Sensitivity of this Method***

The majority of significant PPD skin test reactions will remain “positive” 7 days after application. Those that have diminished or disappeared by Day 7 will be boosted back to positive by the 2<sup>nd</sup> skin test.

\*PPD means “purified protein derivative.” It is the substance used in the Mantoux TB skin test, which is the accepted standard method of TB skin testing. TB skin tests are commonly referred to as a PPD.
